The untapped tourist attractions in Wolaita Zone

In ADDISABABA MELE

No one can deny the fact that Ethiopia is well known for its beautiful scenery and the country possesses many cultural, historical and archaeological attractions with a score of sites. Thanks to the number of massive natural attractions in the country, tourism is a major source of foreign exchange. Recently, the number of tourists visiting the country’s natural attractions is increasing in different parts of the country, which in turn is a huge source of income to the country.

In this regard, Wolaita is one of the regions in the Southern Nations, Nationalities and People’s Region comprising two woredas, Mekelle and Birukemene. Studio is one of the central woredas in the county, being one of the areas with vast natural resources.

The region is also rich in cultural and historical sites, making it a potential tourist destination.

Mount Damota

Mount Damota is the highest mountain in the county, with a height of 3,000 meters. The mountain is a popular tourist attraction and is visited by many hikers and mountaineers every year.

A Josef waterfall

A Josef waterfall is one of the most famous natural attractions in the country. It is located in the Simien Mountains, in the northern part of Ethiopia.

Natural attractions

The region is also rich in natural attractions, such as rivers, lakes, and waterfalls. The region is home to several lakes, including Lake Walia I, the highest lake in Ethiopia, and Lake Walia II, the second highest lake in the country.

Tourist attractions

There are several tourist attractions in Wolaita, including natural attractions such as rivers, lakes, and waterfalls, and cultural attractions such as historical sites and museums.

Part V

Introduces improved farming and breed

The introduction of improved farming and breed as well as improved breeds through artificial insemination and introduction of local breeds like the Szegedi strain is improving livestock productivity. And the project is also supporting the livestock health service through training community animal health workers and providing veterinary kits. Almost all the farmers have been providing valuable support to the health services. Currently, peasants are mobile, while the government health posts are found in a particular village. Hence, their hands of cattle are no longer carried on the cycling community making the provision of the water supply services impossible.

Access to water

The Fourth one is access to water. In addition to accessibility of water, the project is developing water points such as livestock and people-consuming water points.

Before project intervention, the pastoral communities used to drink for about eight hours in search of water. Today, such a condition has greatly improved. They have got water to their locations. People should feel the joy of the change to attend school accompanying mothers or family members to fetch water, and instead of families, the local communities are aware of the need to access water. As a result of the programme, the pastoral communities are now able to enjoy the benefits of improved livestock production.

The final package under livestock productivity improvement is access to market.

By introducing livestock improvement programmes, the pastoral communities have been able to improve their livestock productivity. They have improved their livestock, which in turn has increased their income. The project has also introduced market access to the pastoral communities, allowing them to sell their livestock and improve their livelihoods.

SHARE Bale Eco-region Project - from where to where?

In THE ETHIOPIAN HERALD SATURDAY 22 JULY 2017

BEREHAAN SEBAN PRINTING CENTRE BF135

A project the first part of Africa’s feasibility started in 2001 in Bale Woreda. The project covers an area of 22,000 hectares of degraded land. The main target of the project is to reduce degradation natural forest. The project is currently 7,500 hectares of forest covered 22,000 hectares of degraded land.

The project has also introduced market access to the pastoral communities, allowing them to sell their livestock and improve their livelihoods.
